

# Are the number of false alarms becoming a problem?

## CSAA has a solution.

The Central Station Alarm Association is a non-profit alarm industry trade association.

False alarms are not only a problem for the alarm subscriber, they're also a costly issue for the alarm company, as well as law enforcement agencies and their officers. When local agencies resort to drastic fines or denial of service, everyone loses.

If alarm subscribers have chronic false alarms, resulting in false dispatches, CSAA offers a solution: An exclusive online course dedicated to educating users about the dangers of false alarms and the solutions to prevent them.

CSAA will work with you to make the online course solution the preferred level of response to chronic false alarms.

CSAA's online False Alarm Prevention course:

- Is easy
- Involves no administrative burden
- Is the most effective tool available
- Costs local authorities nothing (Students pay \$39.95)

Send those with chronic false alarms to school. Send them to [www.csaalarmtraining.com](http://www.csaalarmtraining.com), click on the "False Alarm Prevention" button and require them to take the course and show you the "Certificate of Completion." This is a balanced assurance that offenders are aware of the causes of false alarms and how to eliminate them. Join CSAA in tackling this issue. It is in the best interest of everyone in the industry to educate subscribers on the impact of false alarms to the community.

Visit <http://csaintl.org/education/false-alarm/> for details.
